A web based word processor for kids without email

December 5, 2013

What is it?

Cloud based word processing for schools

Write, edit, collaborate, save and share work on any tablet, phone or computer

No app, plugin or installation required! No Student sign up!

In a nutshell, scrawlar is a slimmed down version of Google Drive where students can type, edit and share docs with each other and the teacher. It works in the browser on computers, tablets and phones.

Simplicity

- Like twiducate or bitstrips, teachers sign up and add students to the class.

As a teacher you create an account for your class

- Scrawlar does not ask for any student details like an email address.

Your students will log in using your class code you and their unique password

- As you add students, a random password is generated.

- You, and them, can change it.

- You can always see it.

Word Processing in the Browser

scrawlar - scrawler, meet scholar.

In today's world our students are professional multitaskers. They are able to generate, currate, filter and decipher messages quickly and easily. scrawlar has been developed to provide classrooms with a safe space to write, collaborate and share ideas without using email.

As an educator, you sign up and add students to your 'network'. From here students can write, edit, collaborate and share work with each other as well as yourself. scrawlar works on all tablets, phones and computers and provides a means for printing from these devices through a computer. However, printing is no longer necessary! Students can submit work within scrawlar!

Go ahead and edit this text.

(You can save and share in the full version)

Features

Collaborative

- After creating and saving a document, students have the option to share with any classmate

- Second option includes whether other people can just view or edit the original doc.

No more computer lab

- Scrawlar can be used on computers but also on tablets giving students the freedom to work in a more natural setting.

- Teachers can leave feedback right on the doc.

- Parents can follow along from home, in real time.
